Creating the model

The ReLU function is one of the most popular activation functions. It stands for "rectified linear unit". Mathematically this function is defined as: y = max(0,x)The ReLU function returns "0" if the input is negative and is linear if the input is positive.

The softmax function is another activation function. It changes input values into values that reach from 0 to 1.

```
In [12]:
    model = keras.Sequential([
        keras.layers.Flatten(input_shape=(28, 28)),  #Input Layer
        keras.layers.Dense(128, activation='relu'),  #hidden Layer abs
        keras.layers.Dense(10, activation='softmax')  #output Layer
])
```

```
In [13]: model.summary()
         Model: "sequential"
          Layer (type)
                                       Output Shape
                                                                 Param #

```

Compile the model

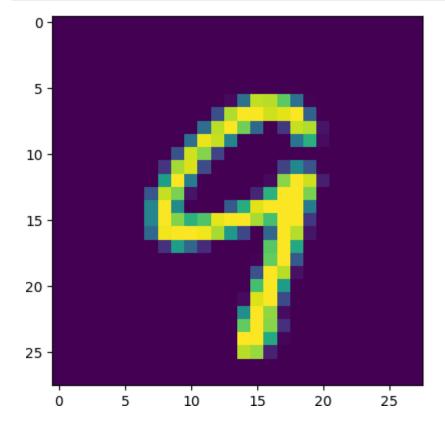

Train the model

```
In [15]: history=model.fit(x_train, y_train,validation_data=(x_test,y_test),epochs=10)
    Epoch 1/10
    curacy: 0.8381 - val_loss: 0.3586 - val_accuracy: 0.9007
    Epoch 2/10
    uracy: 0.9081 - val_loss: 0.2918 - val_accuracy: 0.9187
    Epoch 3/10
    uracy: 0.9217 - val_loss: 0.2564 - val_accuracy: 0.9292
    Epoch 4/10
    uracy: 0.9295 - val loss: 0.2341 - val accuracy: 0.9355
    uracy: 0.9361 - val_loss: 0.2162 - val_accuracy: 0.9404
    Epoch 6/10
    uracy: 0.9410 - val_loss: 0.1992 - val_accuracy: 0.9427
    Epoch 7/10
    uracy: 0.9452 - val_loss: 0.1872 - val_accuracy: 0.9466
    Epoch 8/10
    uracy: 0.9486 - val_loss: 0.1756 - val_accuracy: 0.9493
    Epoch 9/10
    uracy: 0.9514 - val_loss: 0.1671 - val_accuracy: 0.9523
    Epoch 10/10
    uracy: 0.9539 - val loss: 0.1605 - val accuracy: 0.9534
```

Evaluate the model

Making Prediction on New Data

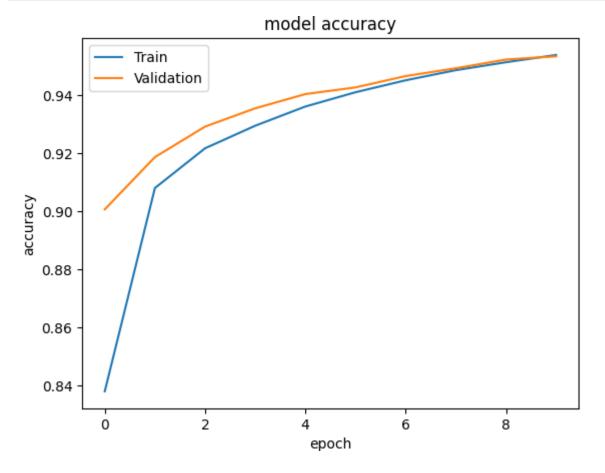

```
In [17]:
    n=random.randint(0,9999)
    plt.imshow(x_test[n])
    plt.show()
```

Plot graph for Accuracy and Loss

```
In [19]: history.history??
In [20]: history.history.keys()
Out[20]: dict_keys(['loss', 'accuracy', 'val_loss', 'val_accuracy'])
```

```
In [21]: plt.plot(history.history['accuracy'])
    plt.plot(history.history['val_accuracy'])
    plt.title('model accuracy')
    plt.ylabel('accuracy')
    plt.xlabel('epoch')
    plt.legend(['Train', 'Validation'], loc='upper left')
    plt.show()
```

Graph represents model accuracy

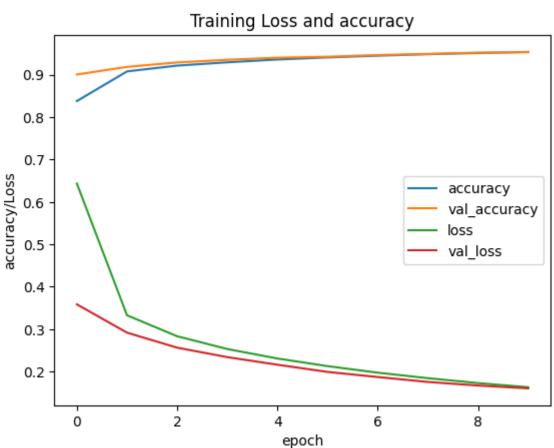

```
In [22]: plt.plot(history.history['loss'])
    plt.plot(history.history['val_loss'])
    plt.title('model loss')
    plt.ylabel('loss')
    plt.xlabel('epoch')
    plt.legend(['Train', 'Validation'], loc='upper left')
    plt.show()
```

0.6 - Train Validation 0.5 - 0.3 - 0.2 - 0.2 - 0.2 - 0.4 - 6 8

epoch

graph represents the model's loss

```
In [23]: plt.plot(history.history['accuracy'])
    plt.plot(history.history['val_accuracy'])
    plt.plot(history.history['loss'])
    plt.plot(history.history['val_loss'])
    plt.title('Training Loss and accuracy')
    plt.ylabel('accuracy/Loss')
    plt.xlabel('epoch')
    plt.legend(['accuracy', 'val_accuracy','loss','val_loss'])
    plt.show()
```

Conclusion: With above code We can see, that throughout the epochs, our model accuracy increases and our model loss decreases, that is good since our model gains confidence with its predictions.

- 1. The two losses (loss and val_loss) are decreasing and the accuracy (accuracy and val_accuracy) are increasing. So this indicates the model is trained in a good way.
- 2. The val_accuracy is the measure of how good the predictions of your model are. So In this case, it looks like the model is well trained after 10 epochs

Save the model

```
In [24]: pwd

Out[24]: 'C:\\Users\\rasha\\OneDrive\\Desktop\\Deep learning\\Assignment2'

In [26]: keras_model_path='C:\\Users\\rasha\\OneDrive\\Desktop\\Deep learning\\Assignme #'DL.ipynb'
    model.save(keras_model_path)

    INFO:tensorflow:Assets written to: C:\Users\rasha\OneDrive\Desktop\Deep learning\Assignment2\assets

    INFO:tensorflow:Assets written to: C:\Users\rasha\OneDrive\Desktop\Deep learning\Assignment2\assets

INFO:tensorflow:Assets written to: C:\Users\rasha\OneDrive\Desktop\Deep learning\Assignment2\assets
In [27]: #use the save model
restored_keras_model = tf.keras.models.load_model(keras_model_path)
